Automotive Simulation: Proceedings of the 2nd European Cars/Trucks Simulation Symposium, Schliersee, FRG, May 1989

This book is a collection of reports by leading experts presenting the state of the art in automotive simulation, robot drivers and driving simulators. It covers highly qualified mathematical modelling tools including solvers, the use of new computer hardware, and the combination of tools and hardware to create realistic models which correlate with testing and experimental data. Two new approaches in car design are described here, one from the area of safety and crashworthiness and the other covering riding comfort and aerodynamics. In this area software tools play a major role, and artificial intelligence methods are employed to help the user handle complexity. Automotive simulation is a new technique in a century-old industry which has until now been based on building and testing prototypes.
