Thermodynamics of Information Processing in Small Systems (Springer Theses) Takahiro Sagawa

This thesis presents a general theory of nonequilibrium thermodynamics for information processing. Ever since Maxwell's demon was proposed in the nineteenth century, the relationship between thermodynamics and information has attracted much attention because it concerns the foundation of the second law of thermodynamics. From the modern point of view, Maxwell's demon is formulated as an information processing device that performs measurement and feedback at the level of thermal fluctuations. By unifying information theory, measurement theory, and the recently developed theory of nonequilibrium statistical mechanics, the author has constructed a theory of "information thermodynamics," in which information contents and thermodynamic variables are treated on an equal footing. In particular, the maximum work that can be extracted by the demon and the minimum work that is needed for measurement and information erasure by the demon has been determined. Additionally, generalizations of nonequilibrium relations such as a Jarzynski equality for classical stochastic systems in the presence of feedback control have been derived. One of the generalized equalities has recently been verified experimentally by using sub-micron colloidal particles. The results obtained serve as fundamental principles for information processing in small thermodynamic systems, and are applicable to nanomachines and nanodevices.

From reader reviews:

Serafina Hayes:

Why don't make it to be your habit? Right now, try to ready your time to do the important work, like looking for your favorite publication and reading a book. Beside you can solve your long lasting problem; you can add your knowledge by the publication entitled Thermodynamics of Information Processing in Small Systems (Springer Theses). Try to the actual book Thermodynamics of Information Processing in Small Systems (Springer Theses) as your close friend. It means that it can for being your friend when you really feel alone and beside associated with course make you smarter than ever. Yeah, it is very fortunated to suit your needs. The book makes you a lot more confidence because you can know every little thing by the book. So , we need to make new experience in addition to knowledge with this book.

David Binkley:

The book Thermodynamics of Information Processing in Small Systems (Springer Theses) give you a sense of feeling enjoy for your spare time. You need to use to make your capable more increase. Book can to be your best friend when you getting anxiety or having big problem with the subject. If you can make looking at a book Thermodynamics of Information Processing in Small Systems (Springer Theses) for being your habit, you can get more advantages, like add your capable, increase your knowledge about many or all subjects. You may know everything if you like open up and read a e-book Thermodynamics of Information Processing in Small Systems (Springer Theses). Kinds of book are a lot of. It means that, science e-book or encyclopedia or some others. So , how do you think about this e-book?

Mary Salas:

Do you one of the book lovers? If yes, do you ever feeling doubt while you are in the book store? Try to pick one book that you find out the inside because don't determine book by its cover may doesn't work at this point is difficult job because you are afraid that the inside maybe not because fantastic as in the outside search likes. Maybe you answer is usually Thermodynamics of Information Processing in Small Systems (Springer Theses) why because the wonderful cover that make you consider with regards to the content will not disappoint an individual. The inside or content will be fantastic as the outside as well as cover. Your reading 6th sense will directly guide you to pick up this book.

Sheryl Vaughan:

Reading a book for being new life style in this year; every people loves to learn a book. When you study a book you can get a lot of benefit. When you read ebooks, you can improve your knowledge, due to the fact book has a lot of information on it. The information that you will get depend on what kinds of book that you have read. If you would like get information about your analysis, you can read education books, but if you act like you want to entertain yourself read a fiction books, this kind of us novel, comics, in addition to soon. The Thermodynamics of Information Processing in Small Systems (Springer Theses) will give you a new

experience in reading a book.
